Description

DESCRIBE queries need to be implemented.

While this can just return a value of "Pink fluffy elephants", something more intelligent will be better.

I am thinking of taking the DESCRIBE variable ($d), and adding the following to the WHERE clause:

```
AND

(($d $predicate $value AND

$predicate &lt;rdf:label&gt; $property)

OR

($d $property $value MINUS

$property &lt;rdf:label&gt; $label))
     AND

$value &lt;rdf:type&gt; &lt;rdfs:Literal&gt; in &lt;sys:type&gt;
```

This shows all literal properties, using labels for the predicate where possible, and URIs when not.

History

#1 - 10/15/2008 04:10 AM - Paula Gearon

- Status changed from New to Closed

- Resolution set to fixed

Feedback showed that most people just want property/value pairs for a subject. This was in release 2.0.0.
