<b>Target version:</b>	SPARQL Query Engine		
<b>Resolution:</b>	fixed		
<b>Description</b> The SPARQL parser is implemented in a separate project. This is inconvenient, both for following the source, and for updating with new features, such as SPARQL/Update.  The original idea was to keep this functionality as modularized as possible, allowing it to be used for other projects as well (since other libraries that profess to do this are often too tied to a particular implementation). However, this is not really necessary, as it is unlikely to ever be used this way.
