Mulgara - Bug #176

A more descriptive exception needed in case of triples modifications to a non-existent graph in store.

Description

The exception thrown by Mulgara when triple operations are peformed on a non-existent graph is quite confusing. For example, currently you might see:

```
org.mulgara.query.QueryException: Unsupported protocol for destination graph (local, -1 : 'local')
```

It would be a little more useful to see:

```
org.mulgara.query.MissingGraphException: Graph <graph uri> not created in store.
```

or something like that.
