

Mulgara - Bug #124

Load operation requires valid source URL even if overridden with InputStream

05/20/2008 09:14 PM - Alex Hall -

Target version:			
Resolution:	fixed		

Description

The org.mulgara.query.operation.Load class extends the [DataTx](#) operation, whose constructor requires URI's for source, destination, and graph. The [DataTx](#) operation also provides a setOverrideStream() method allowing the client to override the source URI with an [InputStream](#). Even if an overriding input stream is used, the source URI is required to be a valid URL or else line 137 will throw an error. The line in question is:

```
I believe that the correct behavior if a client provides an overriding [[InputStream]] is to never evaluate the source URI and treat the input stream as always uncompressed.
```
