Target version:	SPARQL Query Engine		
Resolution:			

Description

Currently the SPARQL interpreter handles default graphs by setting the graph on any queries it parses.

A mechanism that will fit in better with the SPARQL protocol will be to allow the graph to be set to null, and for the Connection to set the graph. This will require all Connection implementations to accept a default graph setting, and to set this on any queries that require it as they are passed along the connection.
