Mulgara - Feature #175

Resolver interface needs to provide back-up/restore capability

Description

To provide a simple administrative routine, it would help if the resolver interface supported backup and restore capabilities.

This will allow resolvers to also dump their data into a backup, and have restore data brought back in. This will only be applicable to writable resolvers.

Resolvers may also need to mark a new section of the backup file, which will be ignored by other resolvers. This will result in new code that asks each resolver if it *can* do backups, and during restore it will need to iterate over each resolver to find out with one can handle the data about to be restored (according to a section marker in the backup file)
