

Mulgara - Bug #176

A more descriptive exception needed in case of triples modifications to a non-existent graph in store.

Resolution:			
Description			
<p>The exception thrown by Mulgara when triple operations are performed on a non-existent graph is quite confusing. For example, currently you might see:</p>			
<pre>org.mulgara.query.QueryException: Unsupported protocol for destination graph (local, -1 : 'local')</pre>			
<p>It would be a little more useful to see:</p>			
<pre>org.mulgara.query.MissingGraphException: Graph <graph uri> not created in store.</pre>			
<p>or something like that.</p>
