Target version:			
Resolution:			

Description

This is the next cleanup refactoring.

We have:

[[ResolverFactory]] findModelResolverFactory(long model)

[[ResolverFactory]] findUncachedExternalResolverFactory(long model)

[[ResolverFactory]] findModelTypeResolverFactory(URI modelTypeURI)

Resolver obtainResolver(ResolverFactory resolverFactory)

URI mapToModelTypeURI(URI modelURL)

URI findModelTypeURI(long model)

String findProtocol(long n)

most of which do multiple overlapping tasks, often implemented slightly differently.

Most of these methods used to live in different classes, and have migrated here as their homes were refactored and tidied.

[[DatabaseOperationContext]] and [[LocalQueryResolver]] are the last two dumping grounds in the system-core where we have left the cruft that was too difficult to clean up concurrently with previous refactorings; and [[DatabaseOperationContext]] is by far the worst of the two – so it's next on the list.
