<b>Resolution:</b>	fixed		

#### Description

Literals in the string pool are not encoded with language codes. In the past, this was put off "until later", but it is a serious lapse in supporting the RDF standards.

The places where literals are stored and retrieved from a byte buffer are:

The **SPStringImpl** class.

**SPObjFactoryImpl.newSPObj(Node)** *this converts a [LiteralImpl](#) into an SPStringImpl*

I suggest using an escapable code for a separator character. This will allow minimal changes to the current system.

#### History

#1 - 05/18/2008 04:45 PM - Paula Gearon

- Status changed from New to Closed

- Resolution set to fixed

#2 - 05/18/2008 10:37 PM - ronald -

Fixed in [r942](#) and [r943](#).
